Combination Classic Cast Bronze Car Station and Annunciator PLC based. Call for pricing.

Item: 70440 - Elevator Operator Seat
With Cherry Stain: (left image shows folded)

Elevator Operators

Before the advancement of automatic elevators they were controlled by hand and by "Elevator Operators." These jobs were quite often considered the life blood of the building.

The elevator operators were greeters, security and the ones who knew the business of pretty much everyone in the building.

Today there are still many elevator operators in existence and for those uniquely vintage units we offer car switches, controllers, annunciators and elevator seats.

Don't consider your elevator obsolete because it's run by hand, consider it unique.

Elevator Seat

Vital to any elevator operator's job the "Folding Seat" helped get him through an 8-10 hour shift. Our elevator folding seat was a piece we added to our manufacturing capabilities and it's been a popular one. The oak seat is durable and stained to either a cherry or darker mahogany. If you would prefer to stain it yourself we can provide it with a sanded finish. These are ideal for home elevators!

Annunciators

The Hall Call Annunciators that we manufacture today are PLC based and solid state. You can reuse your existing hall calls and wire them into our unit. Dry contacts make sure that voltage is not a problem. We can set up any annunciator for simple hall call illumination or directional hall call illumination if up and down buttons are located in the intermediate floor pushbutton stations.

Car Switches

CJA Car Switches come in both surface and flush mounted units and are available in a variety of speeds. Each unit has a dead man's switch which is reliant on gravity to "spring" the handle to the 12 o'clock position or off.

Car Switch Elevator Controllers

The problem with most older style elevator controllers that run car switches is that they are old and parts may not be readily available. We do offer newer style controllers that will run DC Elevator Systems utilizing an SCR Elevator Drive. Please note that your local inspectors will allow this type of repair/replacement under the elevator code/jurisdiction of where the elevator is located.

Ordering Information

Style 12 Classic Car Station with Muntz Inlay #4 Finish, PLC Annunciator and customer supplied security monitor.

Car Switches

Product Features

- 1 -10 Speed Acceleration
- “Dead Man’s” Switch
