Pedestal Hall Call Station
with FEOK1 Phase I Switch

Custom Fixtures

We can do almost anything when it comes to signal fixtures. If you're an architect or consultant and want something special and it needs to be water or corrosion resistant then you've come to the right place.

If you're contemplating a custom design and want pricing, simply make a general sketch of the fixture you're looking for. This can be on a napkin, standard sheet of paper or on large paper format. Once you've got the sketch completed fax it to **708-867-5467**, attention Fixture Team.

After we review your design we'll fax you a quotation. If the project is a go, we will create a set of drawings for approval by you. Once the final design is completed and approved we will begin manufacturing.

Our manufacturing capabilities allow us total control. CNC Milling Machines, Engravers, Plasma Cutters and Waterjet Machines allow us to take your design concept and turn it into reality. You tell us what you want and we'll make it.

Custom Is Our Standard

Skinny car stations, custom enclosure and faceplate sizes, you name it we can do it. Our VX MPB contact block has some great features including it's compact size and voltage rating 6-240 AC.

Pictured above: Skinny Material Lift Hall Station with position indicator. Button centers at 1.75" giving you the maxim number of components while minimizing faceplate size.

Pictured above: The famous VX-I & VX Stainless Steel, NEMA 4/4X & 12 Vandal Proof pushbuttons

Pictured above: MPB Contact Block with Lamp and Pushbutton Actuator, very compact, space saving, multi-voltage design. allows a 1.75" button center distance!

Pictured Right: MPB Contact Block with Lamp and Pushbutton Actuator. 1/2" Thick Stainless Steel plate and hollow tube slanted pedestal station. Meets ADA and Fire Service Requirements and is NEMA 4X.

Increasing Accessibility for Elevators & Buildings

6" x 6" ADA Push Pad Style Oversized Pushbutton Stations

Custom Fixtures

The American's with Disabilities Act addresses most accessibility and building access issues pretty well. However we do have clients that go above and beyond what the Act calls for.

We feel that this is a step forward in making the world a more accessible place.

Since we custom fabricate all our fixtures we can help you design the best possible solution to making your elevator more accessible.

Our custom pad type stations are designed to mount inside or outside the elevator and wire in parallel with the existing smaller call buttons.

After we review your design we'll fax you a quotation. If the project is a go, we will create a set of drawings for approval by you. Once the final design is completed and approved we will begin manufacturing.

Our manufacturing capabilities allow us total control. CNC Milling Machines, Engravers, Plasma Cutters and Waterjet Machines allow us to take your design concept and turn it into reality. You tell us what you want and we'll make it.

Features:

- Stainless Steel or Muntz
- Engraved Logos, Text
- Any Size
- Stations Are Multivoltage
- Can provide vinyl decal's for high contrast
- Any Voltage

Increase Accessibility

Pushpad Buttons

Any size, voltage or engraving you need. These oversized pushbuttons can be as large or small as you'd like.

Custom engraving can be placed on the front or we can apply a weather proof vinyl graphic label for custom applications.

Each panel has four micro switches which activate when any part of the plate is pressed. The distance required for activation is less than .25"

Can be used as car call buttons in the elevator, elevator call buttons in the hallway or for any application that requires additional access without pushing a standard sized pushbutton. Designed to be wired into existing pushbuttons for increased accessibility.

The Units pictured on page 100 are 6" x 6" and have Weatherproof Vinyl Labels For Markings.

Pushbar Stations

Pushbar stations are designed to provide an alternative means, similar to paddle stations, of providing those with limited accessibility the option of calling or placing a floor call.

Available in any size or length these made-to-order stations are available in muntz or stainless steel. The unit shown measures 36" tall and is designed to mount inside the elevator cab. Each pushbar station should be wired in parallel with the existing floor or car call buttons.

C.J. Anderson & Company manufactures a complete line of Pushbar Stations for any environment. Please call with your size requirements or specifications.

Pushbar Pictured Right is 42" Tall and has six micro switches inside the unit.

GSA Architect looking for a different look.

Custom Lanterns

Elevator lobby directional lanterns are one of the most important design elements in any building.

Since we custom fabricate all our fixtures we can help you design the best possible solution to making your elevator more accessible.

We work with architects, GSA, building owners, consultants and contractors to make sure the project is on track and in line with what the end user is expecting.

Our manufacturing capabilities allow us total control. CNC Milling Machines, Engravers, Plasma Cutters and Waterjet

Elevator Arrival Lanterns

Customized Fixtures

Lanterns and hall stations seem to be the number one speciality item that clients request. This is probably because architects and consultants are more involved with the lobby design, which typically includes the building's elevator system. Some of the units shown are just a few of the custom stations we've helped create.

2.

1.

1. Hall Station Lantern Combo

This hall station is a three tiered, nickel plated art deco fixture that includes the following: car directional chime, directional arrows and pushbuttons, all of which are concealed into a nice small fixture. This unit measures 10" tall x 4" wide.

2. Custom Hall Lantern

This hall lantern has two separate solid acrylic lenses which are frosted to permit light to pass through. Car directional chime and standard screw in type bulbs illuminate the direction of six elevators in this particular lobby. This unit measures 32" tall x 2" wide.

3. Custom Hall Lantern

Another custom hall lantern with two solid separate solid acrylic lenses which are frosted to permit light to pass through. Car directional chime and standard screw in type bulbs illuminate the direction of six elevators in this particular lobby. This unit measures 12" tall x 3.5" wide.

4. Custom Hall Lantern

Another custom hall lantern with translucent lenses which are frosted to permit light to pass through. Car directional chime and standard screw in type bulbs illuminate the direction of six elevators in this particular lobby. This unit measures 24" tall x 60" wide.
