

Style #7 & 7.5 Classic Antique Vintage Elevator Fixtures

Classic Antique Fixtures: Style 7

Style #7 is a replicated copy of a hall station that is seen in many parts of the country. This style is very popular on the east coast and is available in many color choices.

Ideal for residential elevators that don't require many features or as a hall station for any number of landings. Many of our customers have chosen Style 7 for their car station requirements when purchasing a complete fixture package.

Classic Antique Fixtures: Style 7.5

C. J. Anderson & Company has added another new style to its Classic Fixture line. This one is called Rope Design, a border casting made to accept material inserts. The fixture shown was made specifically for a NYC co-operative. This particular fixture is an

attendant controlled car switch operation. It has a built in TV screen with the choice of viewing either A or B camera, and has a Taxi call button. This is another example of CJA's ability to meet one-of-a-kind requirements.

The rope design style used to make this fixture can be adapted for any type of application. The border itself is a solid casting with provision for a recessed inlay. The inlay can be bronze, brass, bright nickel, stainless steel or just about any metal or finish you prefer. The border can be of similar or contrasting material. Pictured are matching rope design borders which could be used for car stations, hall stations, phone cabinets, small operating panels, signage, whatever you need or can envision.

Models Available

Style 7 is limited in the number of fixture types that can be made from it. However, if your client loves the design, upon request, we can have new patterns made which would accommodate current elevator and ADA code requirements. Style 7.5 has more features

- Residential Car Stations - 2-3 Landings
- Hall Stations
- Key Switch Stations

Materials/Textures Available

- Yellow Brass
- Antiqued Yellow Brass
- Bronze
- Antiqued Bronze
- Aluminum

Textures Available
